

DATA ANALYTICS PROCESS

Application in Real Life Scenario Case Study / PPT

Project done by Prachi Ranjan

DATA ANALYTICS

Data analytics is the process of collecting, Cleansing, Transforming, and Organizing data in order to draw conclusions, make predictions, and help in decision making.

Data analytics helps businesses operate more effectively and enhance productivity in today's world.

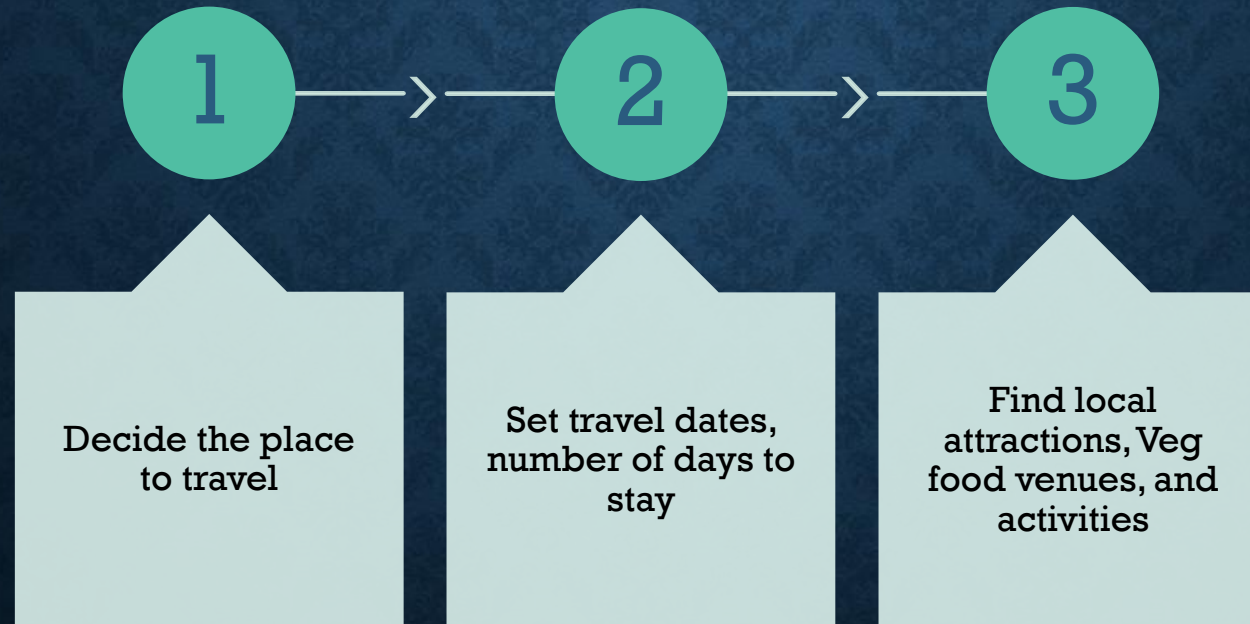

Data Analytics used in different industries like Healthcare, Banking, Security, Ecommerce, Manufacturing, Science and Technologies.

Data is everywhere and we use Data Analytics in everyday life without even knowing it.

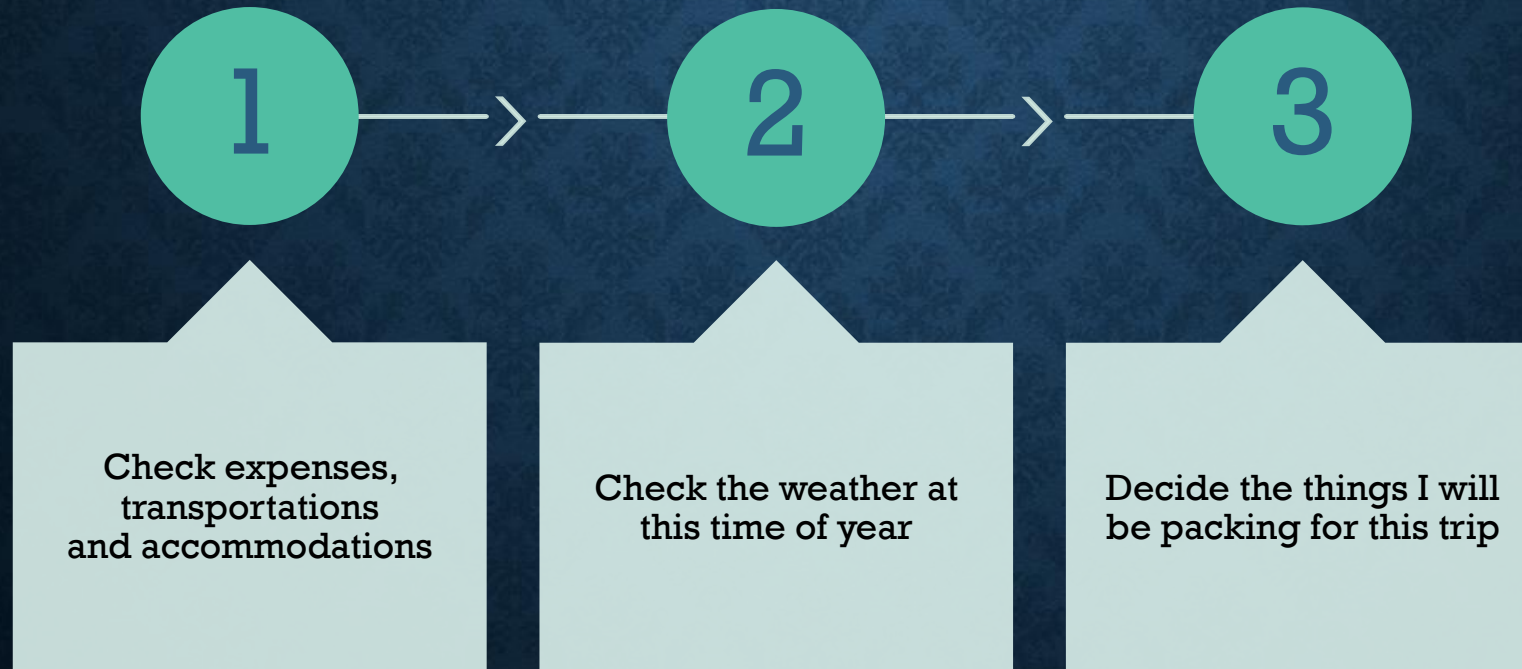

REAL LIFE SCENARIO: SOLO TRIP

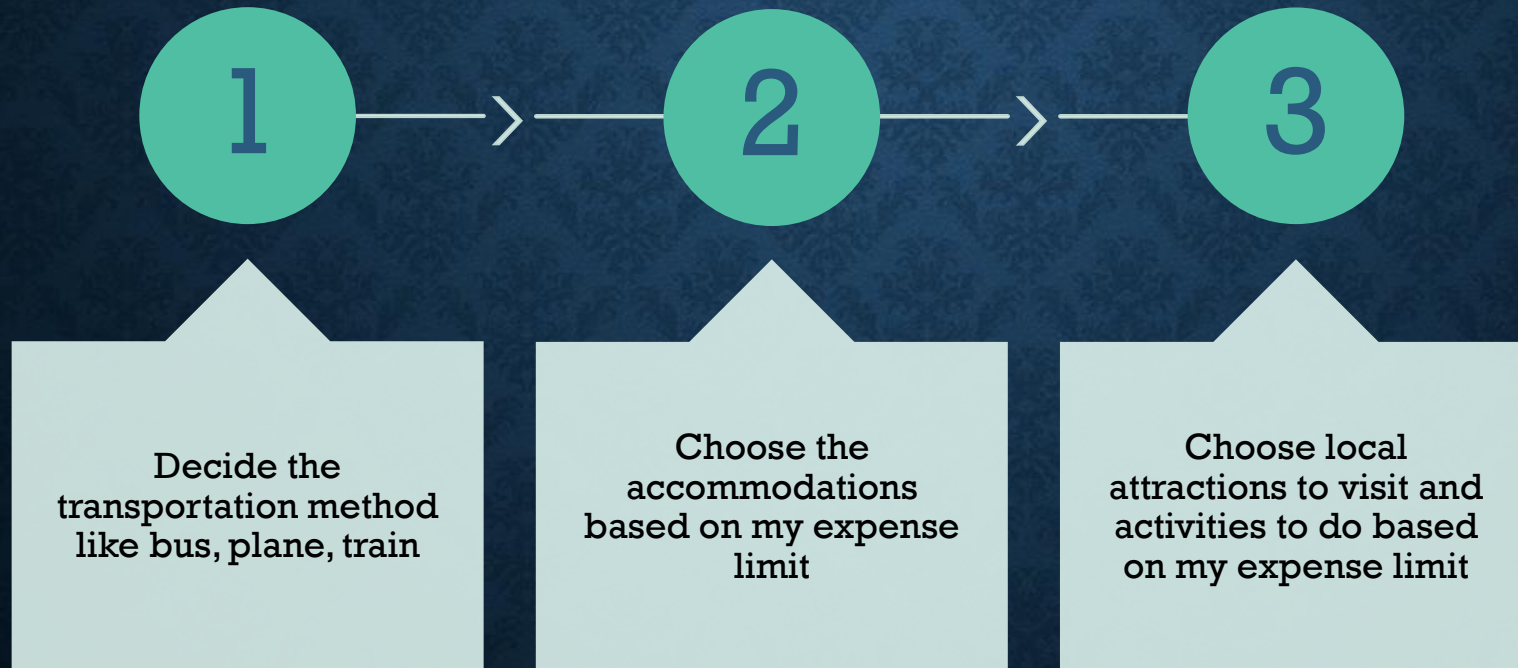

1. Make a plan

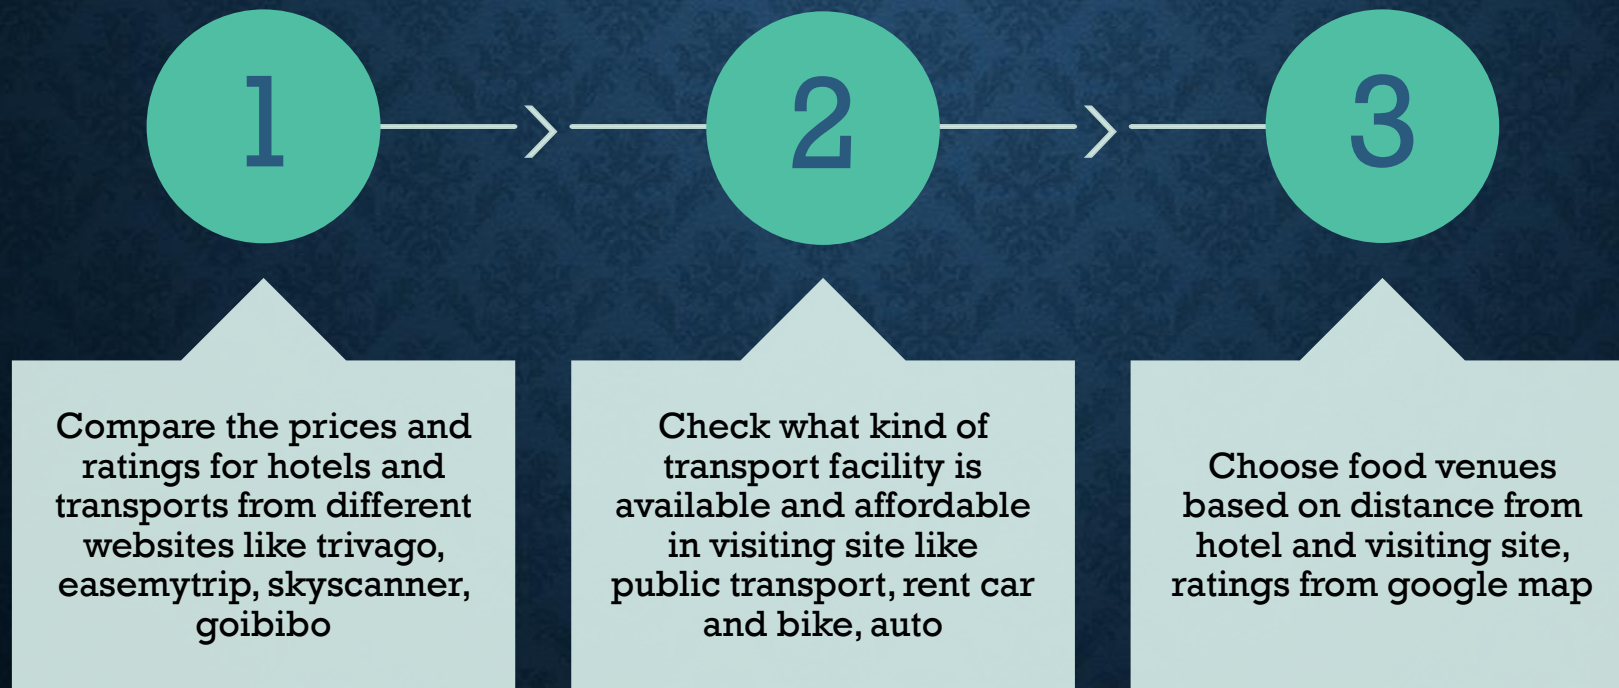

2. Prepare

3. Process

4. Analyze

Share

- Now I will discuss with friends, family who recently travelled there.

Act

- I will execute my plan.

THANK YOU

THANK YOU
